Dear Gary Pearse

I am pleased to advise that your application to update your existing Listing in the National Plan Oil Spill Control Agent Register for the product S-200 OilGone has been accepted. It is now listed as being suitable for use in marine environments as well as shoreline environments.

S-200 OilGone will continue to be listed as a Bioremediation (nutrient) OSCA on the AMSA National Plan website at: <https://www.amsa.gov.au/environment/maritime-environmental-emergencies/national-plan/General-Information/control-agents/index.asp>.

We will also include in the listing links to the updated MSDS and additional ecotoxicology reports you have provided as part of your application as these are the information of most significance to likely users under the National Plan.

We also have an option of providing a hyperlink off the List page to a product website, and if you wish to take advantage of this, please provide a suitable link to Paul Irving, who I understand you have already been working with on getting this application processed.

Yours sincerely

Toby Stone
